

Sales Analysis Dashboard 2026

Veterinary Vaccine Distribution — Ghana Operations

Presented by: Emelia Awin
Period: January - May 2026
Date: May 2026

Introduction

I built an interactive business intelligence dashboard for our operations using data from our 2026 Sales Ledger. I extracted, cleaned, and analysed over 13,500 records from 8 data sheets and turned them into a fully interactive web dashboard that any team member can open in any browser with no software required. The dashboard is live online.

Live Dashboard (now connected to Google Sheets): https://emehub.github.io/Sales-analysis/Sales_Dashboard.html

Data I Worked With

I pulled and analysed data from the following sheets in our Sales Ledger workbook:

Sheet	Records	What I Used It For
A-Sales Orders	1,919 rows	Revenue, products, regions, salesperson performance
B-Invoices	2,962 rows	Total invoiced, payments collected, outstanding balances
C-Payment Receipts	1,897 rows	Cash collection and payment mode tracking
Customers	57 rows	Customer status, revenue YTD, expected revenue
Weekly Sales & Targets	143 rows	Weekly performance vs weekly targets
Delivery Time Tracker	82 rows	Drone delivery zone and time analysis
Reports	Monthly	Product unit sales by month
Inventory	997 rows	Stock movement overview

What I Built

I designed and built a 6-section interactive dashboard with animated scorecards, charts, and searchable tables. Each section is accessible through a clickable sidebar menu:

1. Overview

I created 8 animated scorecards giving a full business snapshot the moment the dashboard loads. I included monthly revenue vs target, regional revenue, salesperson performance, and a collection vs outstanding breakdown.

2. Sales Performance

I tracked every week from Week 2 to Week 18 and plotted actual revenue against weekly targets. I added toggles so you can switch between Revenue, Average Order Value, and Order count views. I also built a colour-coded target achievement chart showing green, amber, and red weeks.

3. Products

I analysed all vaccine products by revenue and built a bar chart and a donut chart showing the product mix. I included a full breakdown table with each product's value and percentage share.

4. Customers

I built three layers of customer intelligence: a leaderboard ranked by revenue, a frequency analysis showing who orders most often, and an outstanding balances tracker for every customer with unpaid invoices. All three tables are searchable.

5. Payments and Collections

I analysed how money is coming in by payment mode, by collection status, and by salesperson. I placed all three charts side by side so they can be compared at a glance.

6. Delivery Tracking

I analysed our drone delivery data by zone and by recipient type. I included a searchable delivery records table showing customer, zone, drop site, and total delivery time.

Key Numbers I Found

Metric	Value
Total Revenue Invoiced (Jan-May 2026)	GHS 2,403,787.00
Total Cash Collected	GHS 1,693,810.00
Total Outstanding Balance	GHS 709,977.00
Collection Rate	70.5%
Total Orders Placed	331
Order Fulfillment Rate	100%

Average Order Value	GHS 7,262.20
Active Customers	42 out of 57 (73.7%)
Top Revenue Customer	Birikwart Ventures - GHS 244,860
Most Frequent Orderer	Razz Asaana Ent - 90 orders

Product Revenue Breakdown

Rank	Product	Revenue (GHS)	Share of Total
1	VIRSIN 121L (NewCavac)	925,470	38.5%
2	VIR 102 (Fowl Pox)	462,188	19.2%
3	VIR 114 (Gumboro Intermediate)	377,625	15.7%
4	VIR 116 (Lasota)	363,825	15.1%
5	VIR 105 (HB1)	165,848	6.9%

Key Insights I Want to Highlight

1. Collections Have Improved Significantly

Our collection rate has risen from 52.3% to 70.5% — meaning we have now collected GHS 1,693,810 of the GHS 2,403,787 invoiced. Outstanding balances have dropped from GHS 979,423 to GHS 709,977. 28 customers still have unpaid invoices, with Birikwart Ventures owing the most at GHS 114,910.

2. One Salesperson is Carrying the Entire Business

I found that Righteous Kamoah generated 95.6% of our total revenue (GHS 2,298,469). This is a concentration risk. If that person is unavailable, our revenue is severely exposed.

3. We Are Dependent on One Product

I found that NewCavac (VIRSIN 121L) alone accounts for 38.5% of all revenue (GHS 925,470). Any supply issue or demand shift for this product would significantly impact our numbers.

4. We Have a Perfect Fulfillment Record

I confirmed that every single order — all 331 of them — was successfully delivered. This is a strong operational achievement and something I believe we should communicate to our customers.

5. Some Customers Remain Inactive

I found that 15 out of 57 customers (26.3%) are currently inactive — a slight improvement from 16 last month. Re-engaging these customers is an immediate revenue opportunity that does not require finding new clients.

6. April Was Our Strongest Month Yet

April delivered GHS 701,192 — our highest monthly revenue so far in 2026, a 67% increase over March. May is showing GHS 232,598 so far and is still in progress.

Closing Note

Everything I have presented here is available live on the dashboard at any time. The charts are interactive — you can click through each section, toggle between views, and search through the tables. I am happy to walk through any section in more detail during this meeting.
